Not for those who don't want to know the properties of things

The questions no one should ask

No one can have the knowledge to make a thing which cannot exhibit: 1. divisibility 2. comparability 3. connectivity 4. disturbability 5. reorderability 6. substituability and 7. satisfiability. So, people must be educated not to ask questions in this connection in order to make them slaves who obediently follow the directives of academic authorities.

- *Can a thing which cannot exhibit divisibility be made?*
- *Can a thing which cannot exhibit comparability be made?*
- *Can a thing which cannot exhibit connectivity be made?*
- *Can a thing which cannot exhibit disturbability be made?*
- *Can a thing which cannot exhibit reorderability be made?*
- *Can a thing which cannot exhibit substituability be made?*
- *Can a thing which cannot exhibit satisfiability be made?*

Divisibility is the property without which no one can either be a part or be a whole. Comparability is the property without which no one can either be an equivalence or be a difference. Connectivity is the property without which no one can either be a link or be a limit. Disturbability is the property without which no one can either be a influence or be a sensation. Reorderability is the property without which no one can either be an origin or be a derivative. Substitutability is the property without which no one can either be a constituent or be a substituent. Satisfiability is the property without which no one can either be a requirement or a fulfillment.

- What cannot exhibit divisibility?
- What cannot exhibit comparability?
- What cannot exhibit connectivity?
- What cannot exhibit disturbability?
- What cannot exhibit reorderability?
- What cannot exhibit substituability?
- What cannot exhibit satisfiability?

People who have knowledge on the questions found in this document won't consider you as an intellect!

No one should ask the above questions because it will **expose the repetitions and reproductions in the 'much celebrated' human knowledge acquired through the greatest efforts and difficulties by the highly educated minds**.

- What would not happen if no thing could exhibit divisibility?
- What would not happen if no thing could exhibit comparability?
- What would not happen if no thing could exhibit connectivity?
- What would not happen if no thing could exhibit disturbability?
- What would not happen if no thing could exhibit reorderability?
- What would not happen if no thing could exhibit substituability?
- What would not happen if no thing could exhibit satisfiability?

Do not use the questions found in this document to make everyone look like an ass!

Everyone and everything can exhibit: 1. divisibility 2. comparability 3. connectivity 4. disturbability 5. reorderability 6. substituability and 7. satisfiability. Everyone who could not identify these properties would have no knowledge on the properties of things. Why can't one make a thing which cannot exhibit these properties? **Have you ever been educated to indentify and list the properties which are exhibited by everyone and everything?** Is a property a thing? Is a property nothing? **What can one know of things which exhibit no property?** What can one evaluate of a thing which exhibits no property? Is no property common to everything? Sivashanmugam's Inclusion Principle (SIP) states that **no two things can be without a common property**. *What properties are exhibited by everyone and everything?* What are the criteria to distinguish things from their properties?

None of the preceding questions can be justifiably answered without exhaustively analyzing the human knowledge. No educational system wants people to analyze the knowledge base and find 'the knowledge which no one can have'. **These open ended questions can prepare and set the student minds to acquire, analyze, integrate and articulate the knowledge on diverse things.**

No one **except the intellects** can have the knowledge to make a thing which cannot exhibit: 1. divisibility 2. comparability 3. connectivity 4. disturbability 5. reorderability 6. substituability and 7. satisfiability.
